WEATHER SYNOPSIS BY REGION

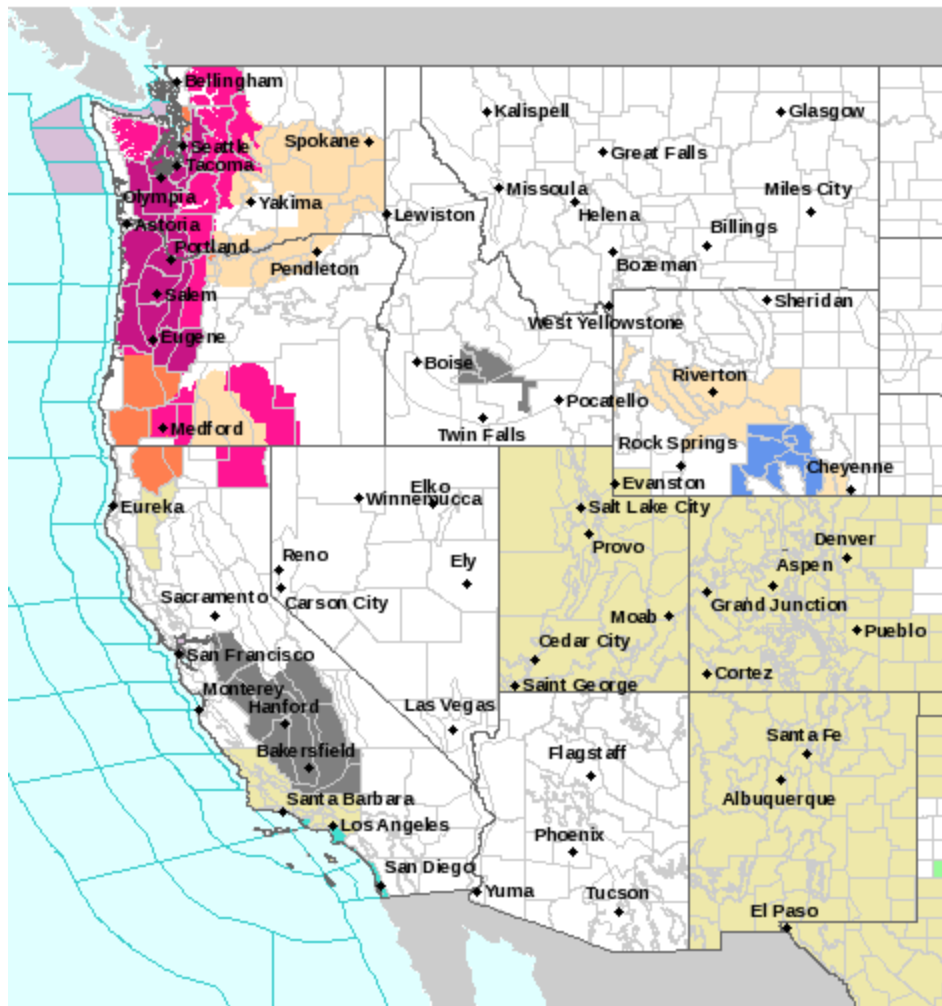

NORTHERN CALIFORNIA

Thunderstorms possible over higher terrain each day through Monday, most numerous and widespread Sunday. Today the high will sit over Northern California, but enough instability will be present to set off a thunderstorm or two over the higher terrain during the afternoon and evening. The high will move east and a low pressure trough will approach from the northwest on Sunday. Afternoon and evening thunderstorms will be more numerous over the higher terrain, but just about any location could see a stray thunderstorm. Even though these storms will produce some rainfall, dry strikes and new ignitions are possible. Due to the amount of lightning expected and a larger coverage area on Sunday this is considered a High Risk for higher terrain in the north and east. A final round of Northern California thunderstorms are possible in eastern areas late Monday as the low pressure trough exits the region. A low pressure trough will produce a dry SW flow pattern Tuesday through the end of the week. Temperatures will continue to be around 10 degrees above normal in inland areas today, but drop to around 4-6 degrees above normal beginning Sunday. Overnight relative humidity (RH) recovery will still remain between 30-45% for many areas, especially mid and upper slopes and away from the marine layer. The marine layer will continue at about 1200-1800 ft. deep most days with daily overnight and morning low clouds and patchy fog pushing ashore furthest in the Humboldt Bay area and the greater Bay Area locations.

SOUTHERN CALIFORNIA

Isolated thunderstorms in a few mountain areas, more widespread over the far eastern deserts. Breezy with low relative humidity (RH) in and near the deserts. A weak trough over the area coupled with easterly flow aloft will generate a mixed bag of weather across the area today. At the surface, onshore flow will generate breezy conditions in and near the desert while easterly winds aloft steers a bit of monsoonal moisture into the area. Yesterday abundant lightning occurred over the Mojave National Preserve. Expect widespread storms to continue across most of the deserts east of Barstow and the Coachella and Imperial Valleys. Isolated thunderstorms will likely occur in the Sierras north of Fresno County and the east sides of the San Bernardino and Cleveland National Forest today. One or two dry strikes may be possible in these areas during the late afternoon hours. High temperatures will continue to trend slowly downward with highs in the 70s in the mountains to the upper 90s in the valleys. Highs may warm slightly Monday through Wednesday, but the very hot weather seen earlier this week is not expected to return anytime soon. Sunday and Monday, expect fewer thunderstorms with all convection ending by Tuesday, at the latest.
